NAME: Solutions.

please check the box of your section

 Section 005 (WF 8:00 am)

or

 Section 006 (WF 9:05 am)**INSTRUCTIONS:**

- (1) To receive credit you must:
 - (a) **work in a logical fashion, show all your work, indicate your reasoning;**
no credit will be given for an answer that just appears;
such explanations help with partial credit
 - (b) if a line/box is provided, then:
 - show you work BELOW the line/box
 - put your answer on/in the line/box
 - (c) if no such line/box is provided, then box your answer
- (2) The MARK BOX indicates the problems along with their points.
Check that your copy of the exam has all of the problems.
- (3) You may **not** use a calculator, books, personal notes.
- (4) During this exam, do not leave your seat. If you have a question, raise your hand. When you finish: turn your exam over, put your pencil down, and raise your hand.
- (5) This exam covers (from *Calculus* by Anton, Bivens, Davis 8th ed.):
Part 1: Sections 10.1, 10.2 and Part 2: Sections 10.3, 10.4, 10.5, 10.6 and 10.8 .

Problem Inspiration:

1. you were warned, from class handouts and old exams
2. homework problem § Ch 10 Review # 9 , homework problem § 10.4 # 28
3. Example from class lecture
4. Serious Series Problems # 10
5. homework problem § 10.6 # 29
6. homework problem § 10.8 # 29
7. from textbook § 10.8 # 49
8. homework problem § 10.8 # 63

1. Fill-in-the blanks/boxes. All series \sum are understood to be $\sum_{n=1}^{\infty}$.

Hint: I do NOT want to see the words absolute nor conditional on this page!

- 1a. n^{th} -term test for an arbitrary series $\sum a_n$.

If $\lim_{n \rightarrow \infty} a_n \neq 0$ or $\lim_{n \rightarrow \infty} a_n$ does not exist, then $\sum a_n$ diverges.

- 1b. Geometric Series where $-\infty < r < \infty$. The series $\sum r^n$

- converges if and only if $|r|$ < 1
- diverges if and only if $|r|$ ≥ 1

- 1c. p -series where $0 < p < \infty$. The series $\sum \frac{1}{n^p}$

- converges if and only if p > 1
- diverges if and only if p ≤ 1

- 1d. Integral Test for a positive-termed series $\sum a_n$ where $a_n \geq 0$.

Let $f: [1, \infty) \rightarrow \mathbb{R}$ be so that

- $a_n = f(\underline{n})$ for each $n \in \mathbb{N}$
- f is a positive function
- f is a continuous function
- f is a nonincreasing function.

Then $\sum a_n$ converges if and only if $\int_1^{\infty} f(x) dx$ converges.

- 1e. Comparison Test for a positive-termed series $\sum a_n$ where $a_n \geq 0$.

- If $0 \leq a_n \leq b_n$ for all $n \in \mathbb{N}$ and $\sum b_n$ converges, then $\sum a_n$ converges.
- If $0 \leq b_n \leq a_n$ for all $n \in \mathbb{N}$ and $\sum b_n$ diverges, then $\sum a_n$ diverges.

- 1f. Limit Comparison Test for a positive-termed series $\sum a_n$ where $a_n \geq 0$.

Let $b_n > 0$ and $\lim_{n \rightarrow \infty} \frac{a_n}{b_n} = L$.

If 0 $< L <$ ∞ , then $\sum a_n$ converges if and only if $\sum b_n$ converges.

- 1g. Ratio and Root Tests for a positive-termed series $\sum a_n$ where $a_n \geq 0$.

Let $\rho = \lim_{n \rightarrow \infty} \frac{a_{n+1}}{a_n}$ or $\rho = \lim_{n \rightarrow \infty} (a_n)^{\frac{1}{n}}$.

- If ρ < 1 then $\sum a_n$ converges.
- If ρ > 1 then $\sum a_n$ diverges.
- If ρ $= 1$ then the test is inconclusive.

- 1h. Alternating Series Test for an alternating series $\sum (-1)^n a_n$ where $a_n > 0$ for each $n \in \mathbb{N}$.

If

- a_n $>$ a_{n+1} for each $n \in \mathbb{N}$
- $\lim_{n \rightarrow \infty} a_n =$ 0

then $\sum (-1)^n a_n$ converges

1i. By definition, for an arbitrary series $\sum a_n$, (fill in the blanks with converges or diverges).

- $\sum a_n$ is absolutely convergent if and only if $\sum |a_n|$ converges
- $\sum a_n$ is conditionally convergent if and only if $\sum a_n$ converges and $\sum |a_n|$ diverges
- $\sum a_n$ is divergent if and only if $\sum a_n$ diverges

1j. Fill in the 3 blank lines (with absolutely convergent, conditional convergent, or divergent) on the following FLOW CHART for class used to determine if a series $\sum_{n=17}^{\infty} a_n$ is: absolutely convergent, conditional convergent, or divergent.

2. Circle T if the statement is TRUE. Circle F if the statement is FALSE.

T F If $\lim_{n \rightarrow \infty} a_n = 0$, then $\sum a_n$ converges

T F If $\sum a_n$ converges, then $\lim_{n \rightarrow \infty} a_n = 0$.

T F If $\sum a_n$ converges and $\sum b_n$ converge, then $\sum (a_n + b_n)$ converges.

T F *eg, take $a_n = \frac{1}{n}$ and $b_n = -\frac{1}{n}$*
If $\sum (a_n + b_n)$ converges, then $\sum a_n$ converges and $\sum b_n$ converge.

T F If $S_N = \sum_{n=1}^N r^n$, then $S_N = \frac{r - r^{N+1}}{1 - r}$.

$$S_N = r + r^2 + \dots + r^N$$

$$r S_N = r^2 + \dots + r^N + r^{N+1}$$

$$(1-r) S_N = r - r^{N+1}$$

one, not zero.

3. Check the correct box and then indicate your reasoning below. Specifically specify what test(s) you are using. A correctly checked box without appropriate explanation will receive no points.

$$\sum_{n=17}^{\infty} \frac{(-1)^n}{n}$$

absolutely convergent

conditionally convergent

divergent

abs conv. ?

$$|a_n| = \frac{1}{n}$$

p-series

$$p=1$$

so $\sum |a_n| \rightarrow \text{divg}$

\Rightarrow not abs. conv.

cond conv. ?

$$\sum_{n=17}^{\infty} (-1)^n \left(\frac{1}{n}\right)$$

$a_n \nearrow$ AST

✓ is $\lim_{n \rightarrow \infty} \frac{1}{n} = 0$ yes

✓ is a_n dec. ?

derivative \rightarrow

$$n^{-1} = -ln^{-2} < 0$$

yes

so \rightarrow cond. conv.

LCT-WAY

4. Check the correct box and then indicate your reasoning below. Specifically specify what test(s) you are using. A correctly checked box without appropriate explanation will receive no points.

absolutely convergent

~~conditionally convergent~~ $a_n > 0$

divergent

$$\sum_{n=1}^{\infty} \frac{1}{\sqrt{n(n+1)(n+2)}}$$

$$a_n = \frac{1}{\sqrt{n^3 + 3n^2 + 2n}} \stackrel{n \rightarrow \text{big}}{\approx} \frac{1}{(n^3)^{\frac{1}{2}}} = b_n$$

$$\lim_{n \rightarrow \infty} \frac{(n^3)^{\frac{1}{2}}}{(n^3 + 3n^2 + 2n)^{\frac{1}{2}}} = \frac{1}{1} = 1$$

$0 < L < \infty$

$b_n = \left(\frac{1}{n}\right)^{\frac{3}{2}}$ p-series, $p > 1$
 $p = \frac{3}{2}$ converg

more algebra details

since $\sum b_n$ converges then $\sum a_n$ converges by LCT

$$\lim_{n \rightarrow \infty} \frac{(n^3)^{\frac{1}{2}}}{(n^3 + 3n^2 + 2)^{\frac{1}{2}}} = \lim_{n \rightarrow \infty} \left[\frac{n^3}{n^3 + 3n^2 + 2} \right]^{\frac{1}{2}}$$

$$= \left[\lim_{n \rightarrow \infty} \frac{n^3}{n^3 + 3n^2 + 2} \right]^{\frac{1}{2}} = \left[\frac{1}{1} \right]^{\frac{1}{2}} = 1$$

CT-WAY

$$n(n+1)(n+2) \rightarrow n^2 + 2n + 1 + 2n \rightarrow n(n^2 + 3n + 2) = \sqrt{n^3 + 3n^2 + 2n}$$

4. Check the correct box and then indicate your reasoning below. Specifically specify what test(s) you are using. A correctly checked box without appropriate explanation will receive no points.

$$\sum_{n=1}^{\infty} \frac{1}{\sqrt{n(n+1)(n+2)}}$$

absolutely convergent

~~conditionally convergent~~ bc pos. series

divergent

$$n(n+1)(n+2)$$

$$n(n^2 + 3n + 2)$$

$$n^3 + 3n^2 + 2n$$

$$\sum_{n=1}^{\infty} \frac{1}{\sqrt{n^3 + 3n^2 + 2n}}$$

COMPARISON TEST

$$b_n = \frac{1}{n^{3/2}}$$

Comp. test

$$a_n = \frac{1}{\sqrt{n^3 + 3n^2 + 2n}}$$

$$b_n = \frac{1}{n^{3/2}}$$

$$\frac{1}{\sqrt{n^3 + 3n^2 + 2n}} < \frac{1}{n^{3/2}} \text{ — by } p\text{-series } \frac{3}{2} > 1 \text{ this converges}$$

therefore since $\frac{1}{\sqrt{n^3 + 3n^2 + 2n}} < \frac{1}{n^{3/2}}$ then

a_n also converges by comparison test

it converges ABSOLUTELY

5. Let

$$a_n = \frac{n!}{(2n-1)!}$$

5a. Find an expression for $\frac{a_{n+1}}{a_n}$ that does NOT have a factorial sign (that is a ! sign) in it.

$$\frac{a_{n+1}}{a_n} = \frac{n+1}{(2n)(2n+1)}$$

5b. Check the correct box and then indicate your reasoning below. Specifically specify what test(s) you are using. A correctly checked box without appropriate explanation will receive no points.

$$\sum_{n=1}^{\infty} (-1)^n \frac{n!}{(2n-1)!}$$

absolutely convergent

conditionally convergent

divergent

absconv? $2n+2-1$ $|a_n| = \frac{n!}{(2n-1)!}$

Ratio test \rightarrow
 $a_{n+1} = \frac{(n+1)!}{(2n+1)!}$

$$a_n = \frac{n!}{(2n-1)!}$$

$$\frac{a_{n+1}}{a_n} = \frac{(n+1)!}{n!} \cdot \frac{(2n-1)!}{(2n+1)!} =$$

$$\frac{\cancel{n!} (n+1)}{\cancel{n!}} \cdot \frac{\cancel{(2n-1)!}}{\cancel{(2n-1)!} (2n)(2n+1)} =$$

$$\frac{n+1}{(2n)(2n+1)}$$

$$\lim_{n \rightarrow \infty} \frac{n+1}{4n^2+2n} = 0 < 1$$

converges

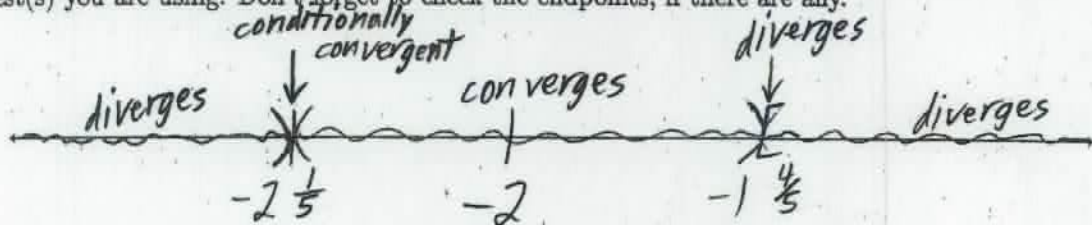

6. Consider the formal power series

$$\sum_{n=1}^{\infty} \frac{(5x+10)^n}{n}$$

Hint: $(5x+10)^n = [5(x+2)]^n = 5^n(x+2)^n = 5^n(x-(-2))^n$

The center is $x_0 = \underline{-2}$ and the radius of convergence is $R = \underline{\frac{1}{5}}$.

As we did in class, make a number line indicating where the power series is: absolutely convergent, conditionally convergent, and divergent. Indicate your reasoning and specifically specify what test(s) you are using. Don't forget to check the endpoints, if there are any.

RT

$$\lim_{n \rightarrow \infty} \left| \frac{(5x+10)^{n+1}}{(5x+10)^n} \cdot \frac{n}{n+1} \right| = \lim_{n \rightarrow \infty} \frac{5^{n+1} |x-(-2)|^{n+1}}{5^n |x-(-2)|^n} \cdot \frac{n}{n+1} =$$

$$\lim_{n \rightarrow \infty} \frac{5 \cdot 5 \cdot |x-(-2)| \cdot |x-(-2)|^n}{5^n \cdot |x-(-2)|^n} \cdot \frac{n}{n+1} = \lim_{n \rightarrow \infty} \frac{5 \cdot |x-(-2)| \cdot n}{n+1} =$$

$$5 \cdot |x-(-2)| \lim_{n \rightarrow \infty} \frac{n}{n+1} = 5 \cdot |x-(-2)| \cdot 1 = 5 \cdot |x-(-2)|$$

$$5 \cdot |x-(-2)| < 1$$

$$|x-(-2)| < \frac{1}{5}$$

Endpoints

$$\sum_{n=1}^{\infty} \frac{(5(-\frac{9}{5})+10)^n}{n} = \sum_{n=1}^{\infty} \frac{1}{n} \quad p\text{-series, } p=1, \text{ diverges}$$

$$\sum_{n=1}^{\infty} \frac{(5(-\frac{11}{5})+10)^n}{n} = \sum_{n=1}^{\infty} \frac{(-1)^n}{n} \quad \leftarrow \text{problem 3 of the exam}$$

$$\sum_{n=1}^{\infty} |a_n| = \sum_{n=1}^{\infty} \left| \frac{(-1)^n}{n} \right| = \sum_{n=1}^{\infty} \frac{1}{n} \quad p\text{-series, } p=1, \text{ diverges}$$

$$\sum_{n=1}^{\infty} a_n = \sum_{n=1}^{\infty} \frac{(-1)^n}{n} \quad \textcircled{1} a_n > a_{n+1} \quad \textcircled{2} \lim_{n \rightarrow \infty} u_n = \lim_{n \rightarrow \infty} \frac{1}{n} = 0$$

"..." $\leftarrow a_n$ converges by A

code - 0

7. Consider the formal power series

$$\sum_{n=1}^{\infty} \frac{x^n}{(\ln n)^n}$$

Hint 1: $\frac{x^n}{(\ln n)^n} = \left[\frac{x}{\ln n}\right]^n$ so would you rather use the root test or the ratio test?

Hint 2: $\ln(a^r) = r \ln(a)$ but $(\ln(a))^r \neq r \ln(a) +$

The center is $x_0 = 0$ and the radius of convergence is $R = \infty$.

As we did in class, make a number line indicating where the power series is: absolutely convergent, conditionally convergent, and divergent. Indicate your reasoning and specifically specify what test(s) you are using. Don't forget to check the endpoints, if there are any.

$$\sum_{n=1}^{\infty} \frac{x^n}{(\ln n)^n} \quad \text{ROOT TEST} \quad \lim_{n \rightarrow \infty} (a_n)^{1/n} \rightarrow \lim_{n \rightarrow \infty} \left| \left[\frac{x^n}{(\ln n)^n} \right]^{1/n} \right| =$$

$$\lim_{n \rightarrow \infty} \left| \frac{x}{\ln n} \right| = |x| \lim_{n \rightarrow \infty} \frac{1}{\ln n} = 0 \cdot |x| = 0 < 1 \rightarrow \text{converges by Root test}$$

\therefore the interval of convergence is $(-\infty, \infty)$

So radius = ∞

8. Fill-in the 6 blanks.
Consider the power series

$$\sum_{n=1}^{\infty} (-1)^n a_n x^n$$

$$= (x-0)^n \quad \left. \begin{array}{l} \\ \\ \end{array} \right\} \Rightarrow \text{center} = 0$$

$$= (x-x_0)^n$$

where all of the a_n 's are positive. Let's say that you know that

if $0 < x < 17$ then $\sum (-1)^n a_n x^n$ converges

if $x = 17$ then $\sum (-1)^n a_n x^n$ conditionally converges

if $17 < x$ then $\sum (-1)^n a_n x^n$ diverges.

Then this power series has:

center at $x_0 = \underline{0}$ and radius of convergence $R = \underline{17}$.

Also, what can you say about the following interval? Fill in the blanks below with:

- is absolutely convergent
- is conditionally convergent
- is divergent
- inconclusive (not enough information given to decide in general).

if $-17 < x < 0$ then $\sum (-1)^n a_n x^n$ abs. conv.

if $x < -17$ then $\sum (-1)^n a_n x^n$ divg.

if $x = 0$ then $\sum (-1)^n a_n x^n$ abs. conv.

if $x = -17$ then $\sum (-1)^n a_n x^n$ divg.

Given

↳ so radius of conv = 17 and have

What about $x = -17$. Well since $a_n > 0$,

$$\bullet \sum (-1)^n a_n x^n \xrightarrow{x=17} \sum (-1)^n a_n 17^n = \sum (-1)^n [(17)^n a_n] \leftarrow \text{c.c.}$$

$$\bullet \sum (-1)^n a_n x^n \xrightarrow{x=-17} \sum (-1)^n a_n (-17)^n = \sum (-1 \cdot 17)^n a_n = \sum (17)^n a_n$$

divg b/c

positive b/c a_n positive
