NAME: _____

CLASS PIN: _____

INSTRUCTIONS:

- (1) To receive credit you must:
 - (a) **work in a logical fashion, show all your work, indicate your reasoning; no credit will be given for an answer that *just appears*;**
such explanations help with partial credit
 - (b) if a line/box is provided, then:
 - show you work BELOW the line/box
 - put your answer on/in the line/box
 - (c) if no such line/box is provided, then box your answer
- (2) The MARK BOX indicates the problems along with their points.
Check that your copy of the exam has all of the problems.
- (3) You may **not** use a calculator, books, personal notes.
- (4) During this exam, do not leave your seat unless you have permission. If you have a question, raise your hand. When you finish: turn your exam over, put your pencil down, and raise your hand.
- (5) This exam covers (from *Calculus* (ET) Stewart 6th ed.):
 - (a) Sections 7.1 – 7.5, 7.8 for the inclass problems
 - (b) Section 11.1 for the take home part.

**Due Friday Sept. 23 at the beginning of class
in LC 102.**

Honor Code Statement

I understand that it is the responsibility of every member of the Carolina community to uphold and maintain the University of South Carolina's Honor Code.

As a Carolinian, I certify that I have neither given nor received unauthorized aid on this exam.

I understand that if it is determined that I used any unauthorized assistance or otherwise violated the University's Honor Code then I will receive a failing grade for this course and be referred to the academic Dean and the Office of Academic Integrity for additional disciplinary actions.

Furthermore, I have not only read but will also follow the above Instructions.

Signature : _____

⊙. For the following **SEQUENCES** in 1–5:

- if the limit exists, find it
- if the limit does not exist, then say that it DNE.

Put your ANSWER IN the box and show your WORK BELOW the box.

1.

$$\lim_{n \rightarrow \infty} \frac{5n^2 + 4\sqrt{n}}{6n^3 + 7n^2 + 1} =$$

2.

$$\lim_{n \rightarrow \infty} \frac{5n^8 + 4\sqrt{n}}{6n^3 + 7n^2 + 1} =$$

3.

$$\lim_{n \rightarrow \infty} \frac{5n^3 + 4\sqrt{n}}{6n^3 + 7n^2 + 1} =$$

4.

$$\lim_{n \rightarrow \infty} (-0.917991799917)^n =$$

5.

$$\lim_{n \rightarrow \infty} (-1.0000000000000017)^n =$$

6. A sequence $\{a_n\}$ has the **limit** L , written as

$$\lim_{n \rightarrow \infty} a_n = L ,$$

if

for every $\varepsilon > 0$

(Finish filling in the box with the proper Definition 2 (not Def. 1) on page 677. I started you out)

7. Prove that

$$\lim_{n \rightarrow \infty} \left(8 + \frac{(-1)^n}{n^3} \right) = 8$$

by using the definition of limit in the previous problem. An outline of the proof is provided, you just need to fill in the blanks.

Proof: Fix _____ .

Pick a natural number $N \in \mathbb{N}$ so big that _____ ,
which we can do by Archimedes Principle.

Fix $n > N$.

Then $|a_n - L| =$ _____ .
