Name: ?

Variant of **3.3.20 A**.

Sundstrom §3.3 p129. Math 300

Evaluation of Proof Exercise

Following the instructions for (linked) *Evaluation of Proofs* exercises (which also are posted on the course homework page), evaluate the below justification of the given conjecture.

Proposed Proof. Let x be an irrational number. This means that for all integers a and b with $b \neq 0$

course nonlework page), evaluate the below justification of the given conjecture.

• Conjecture A. For each real number x, if x is irrational and m is an integer, then mx is irrational.

$$x \neq \frac{a}{b}.\tag{1}$$

Hence, we may conclude that

$$mx \neq \frac{ma}{b} \tag{2}$$

and, therefore, mx is irrational.
