Exercise. Let $G$ be an open subset of $\mathbb{C}$ and $f \in H(G)$. Define

$$
\begin{aligned}
G^{*} & :=\{z \in \mathbb{C}: \bar{z} \in G\} \\
f^{*}(z) & :=\overline{f(\bar{z})} \quad \text { for } z \in G^{*} .
\end{aligned}
$$

Note (i.e., you need not show) that $G^{*}$ is open in $\mathbb{C}$.

1. Show that $f^{*} \in H\left(G^{*}\right)$.
2. Express $\left(f^{*}\right)^{\prime}$ in terms of $f^{\prime}$.

Hint. Does your solution to part 2 make sense to you geometrically?
