

## **Homework due Monday October 7**

1. Read and reread Section 3.3 pages 106–116 yet again.
2. On Pages 119–120 Problems 12–19. These mostly deal with using the microscope equation to estimate various things. While most of these problems are not too hard, this is a long assignment and so you should get started before Sunday. As usual I will be in our class room on Friday at 9:05.
