Remove everything from your desk except this page and a pencil or pen. The solution will be posted soon after the quiz is given.

Circle your answer. Show your work. Your work must be correct and coherent.

Find
$$\int_1^\infty \frac{1}{(3x+1)^2} dx$$
.

Answer: The integral is improper because one of the end points is ∞ . We approximate the improper integral with proper integrals and take the limit:

$$\int_{1}^{\infty} \frac{1}{(3x+1)^2} dx = \lim_{b \to \infty} \int_{1}^{b} \frac{1}{(3x+1)^2} dx.$$

Let u = 3x + 1. It follows that du = 3dx. The integral is equal to

$$\lim_{b \to \infty} \frac{1}{3} \int_{x=1}^{x=b} \frac{1}{u^2} du = \lim_{b \to \infty} \frac{1}{3} \frac{-1}{u} \Big|_{x=1}^{x=b} = \lim_{b \to \infty} \frac{1}{3} \frac{-1}{3x+1} \Big|_{x=1}^{x=b} = \lim_{b \to \infty} \frac{1}{3} \left(\frac{-1}{3b+1} + \frac{1}{4} \right)$$

$$= \boxed{\frac{1}{1}}$$
