Data Analytics Workshop

by Katherine Thompson
Director of Graduate Studies, Statistics
University of Kentucky

Data Analytics

Are you interested in data analytics? We will use publicly available Airbnb data and create both plots and geographic visualizations of the data - which we can use to identify listing characteristics related to the price and/or quality of the rental. We will work in JMP and/or R depending on your preference - no experience necessary! Methods and code will be provided for both new and experienced programmers. If you have a laptop, feel free bring it, although this is not necessary to participate. The event will be held in the computer lab.

Katherine Thompson, PhD is an Associate Professor and Director of Graduate Studies in the Department of Statistics at the University of Kentucky.

Thursday 30th January 2020
6:00 pm
LC 401
