The Mathematics of Game Shows

Many game shows have a rich mathematical foundation, drawing on topics in probability, game theory, and decision theory. Join Paul Dreyer, a mathematician who has consulted on over 30 game shows, in an exploration of the mathematics behind a number of shows on which he worked, including The Wall, Million Second Quiz, and Spin the Wheel.

With Guest

Paul Dreyer

Some attendees will also have opportunities to win prizes, because what good is a game show without prizes?
