

Student Seminar

Pi Mu Epsilon

& GAMECOCK MATH CLUB

A Career WITH Mathematics

by Mitchel Colebank, USC Assistant
Professor

So, you've decided to pursue a degree in mathematics. Will you be a mathematician? Will you be a teacher? Are these the only two options? The answer is no. A mathematics degree prepares individuals for being problem-solvers and critical thinkers. In this active seminar, we will investigate careers in mathematics and identify where YOU should apply your mathematical knowledge. We will start with a broad overview of careers in mathematics across education, industry, government, and academia. Then, we will break off into groups to go "job hunting," and identify careers and job titles where a mathematics degree can take you. We will spend the last few minutes talking about internships and how you can position yourself for career readiness after undergrad.

Please bring your laptops!
