

Math 142  
Joseph C Foster  
Summer 2019  
Final Exam

Name: \_\_\_\_\_  
June 22nd, 2019  
Time Limit: 150 minutes

This exam contains 14 pages (including this cover page) and 26 questions. You have 150 minutes to complete the exam.

**No calculators** are allowed. Turn your phones off and place them on your desk face down. Remove any smartwatches and non-religious head-wear. Cheating of any kind will not be tolerated and will result in a grade of zero. If you wish to leave the room during the exam you should place your phone at the front of the class before doing so.

Show **all necessary** work to receive full credit. An answer with no work, even if correct, will not receive full marks. Please circle or box your final answer. If you cannot complete a problem but can write down what you want to do, and this is correct, you can still receive partial credit. Don't leave anything blank! The space provided is indicative of the amount of work required.

There are 26 questions in this test. You are expected to answer 13 of them, half from each section. You may answer more, but only your best 13 will count towards your final grade. Instructions as to what to answer are given in each section.

## Integration by Parts

For questions 1 – 4, answer any **two**. You may answer more, but only the scores from the best **two** will be counted.

1. (10 marks) Evaluate

$$\int -x^4 e^{-x} dx.$$

2. (10 marks) Evaluate

$$\int_1^e \frac{\ln(x)}{x^2} dx.$$

3. (10 marks) Evaluate

$$\int e^{3x} \sin(4x) dx.$$

4. (10 marks) Evaluate

$$\int_0^1 4 \arctan(x) dx.$$

## Trigonometric Integrals

For questions 5 – 6, answer any **one**. You may answer both, but only the score from the best **one** will be counted.

5. (10 marks) Calculate

$$\int 24 \sin^5(x) \cos^3(x) dx.$$

6. (10 marks) Calculate

$$\int_0^{2\pi} \cos^2(2x) dx.$$

## Trigonometric Substitution

For questions 7 – 8, answer any **one**. You may answer both, but only the score from the best **one** will be counted.

7. (10 marks) Evaluate

$$\int \frac{25}{x^2 \sqrt{25 - x^2}} dx.$$

8. (10 marks) Evaluate

$$\int \frac{1}{(x^2 + 1)^{3/2}} dx.$$

## Integration of Rational Functions

For questions 9 – 10, answer any **one**. You may answer both, but only the score from the best **one** will be counted.

9. (10 marks) Calculate

$$\int \frac{x^2 + 2x - 1}{x^3 - x} dx.$$

10. (10 marks) Calculate

$$\int \frac{5x^2 + 3x - 2}{x^3 + 2x^2} dx.$$

## Improper Integrals

For questions 11 – 12, answer any **one**. You may answer both, but only the score from the best **one** will be counted.

11. (10 marks) Decide whether

$$\int_0^3 \frac{1}{\sqrt{3-x}} dx$$

converges or diverges. If it converges, find the value of the integral.

12. (10 marks) Decide whether

$$\int_4^{\infty} e^{-x/2} dx$$

converges or diverges. If it converges, find the value of the integral.

## Infinite Series

For questions 13 – 16, answer any **two**. You may answer more, but only the scores from the best **two** will be counted.

13. (10 marks) Decide whether the following series converges or diverges. You may use any of the tests we covered in class, however you **must indicate which test you use** and interpret its result correctly.

$$\sum_{n=1}^{\infty} \frac{(-1)^{n-1}n}{5^n}.$$

14. (10 marks) Decide whether the following series converges or diverges. You may use any of the tests we covered in class, however you **must indicate which test you use** and interpret its result correctly.

$$\sum_{n=1}^{\infty} \frac{\ln(n)}{n}.$$

15. (10 marks) Decide whether the following series converges or diverges. You may use any of the tests we covered in class, however you **must indicate which test you use** and interpret its result correctly.

$$\sum_{n=1}^{\infty} \frac{n+1}{n^2\sqrt{n}}.$$

16. (10 marks) Find **all** real numbers  $r$  such that

$$\sum_{n=2}^{\infty} r^n = \frac{1}{12}.$$

## Power Series

For questions 17 – 18, answer any **one**. You may answer both, but only the score from the best **one** will be counted.

17. (10 marks) Determine the interval of convergence of the series

$$\sum_{n=0}^{\infty} \frac{(-1)^n}{2n+1} (x-3)^n.$$

18. (10 marks) Determine the interval of convergence of the series

$$\sum_{n=1}^{\infty} \frac{n}{n^3+1} (x-4)^n.$$

## Taylor Series

For questions 19 – 20, answer any **one**. You may answer both, but only the score from the best **one** will be counted. You may use either substitution and manipulation of known series or the table method.

19. (10 marks) Find the Taylor series for the function  $f(x) = \frac{2}{x^3}$ , centred at  $x = 1$ .

20. (10 marks) Find the Taylor series for the function  $f(x) = x^4 - 2x^3 + 3x^2 + 3$ , centred at  $x = 1$ .

## Parametric Equations

For questions 21 – 24, answer any **two**. You may answer more, but only the scores from the best **two** will be counted.

21. (10 marks) Compute the tangent line to the curve given by the parametric equations

$$x = \sec(t) - 1, \quad y = \cos(t), \quad , t = \frac{\pi}{4}.$$

22. (10 marks) Find the length of the curve given by

$$x = \ln(\sec(t) + \tan(t)) - \sin(t), \quad y = \cos(t),$$

over the interval  $0 \leq t \leq \frac{\pi}{4}$ .

23. (10 marks) Find the area bounded by the curve

$$x = \tan(t), \quad y = \sec(t), \quad 0 \leq t \leq \frac{\pi}{4},$$

and the  $x$ -axis. A sketch of the curve has been provided.

24. (10 marks) Find a Cartesian equation for the path traced by the parametric equations

$$x = t + \frac{1}{t}, \quad y = t - \frac{1}{t}, \quad t > 0.$$

## Polar Coordinates

For questions 25 – 26, answer any **one**. You may answer both, but only the score from the best **one** will be counted.

25. (10 marks) Replace the polar equation with an equivalent Cartesian Equation.

$$r = 1 - 2 \sin(\theta).$$

26. (10 marks) Replace the polar equation with an equivalent Cartesian Equation.

$$r^2 \sin(2\theta) = 2.$$
