Please PRINT your name _____

No calculators, cell phones, computers, notes, etc.

Circle your answer. Make your work correct, complete and coherent.

Please take a picture of your quiz (for your records) just before you turn the quiz in. I will e-mail your grade and my comments to you. I will return your quiz when I next see you.

The quiz is worth 5 points. The solutions will be posted on my website later today.

Math 241, Quiz 3, January 29, 2025

Express $\overrightarrow{v} = \overrightarrow{i} + 7\overrightarrow{j}$ as the sum of a vector parallel to $\overrightarrow{b} = \overrightarrow{i} + 2\overrightarrow{j}$ and a vector perpendicular to \overrightarrow{b} . Please make sure that your answer is correct.

Answer: There is a picture on the next page. We compute

$$\operatorname{proj}_{\overrightarrow{b}} \overrightarrow{\overrightarrow{v}} = \frac{\overrightarrow{\overrightarrow{v}} \cdot \overrightarrow{\overrightarrow{b}}}{\overrightarrow{\overrightarrow{b}} \cdot \overrightarrow{\overrightarrow{b}}} \overrightarrow{\overrightarrow{b}}$$
$$= \frac{(\overrightarrow{\overrightarrow{i}} + 7 \overrightarrow{\overrightarrow{j}}) \cdot (\overrightarrow{\overrightarrow{i}} + 2 \overrightarrow{\overrightarrow{j}})}{(\overrightarrow{i} + 2 \overrightarrow{\overrightarrow{j}}) \cdot (\overrightarrow{i} + 2 \overrightarrow{\overrightarrow{j}})} (\overrightarrow{\overrightarrow{i}} + 2 \overrightarrow{\overrightarrow{j}})$$
$$= \frac{15}{5} (\overrightarrow{\overrightarrow{i}} + 2 \overrightarrow{\overrightarrow{j}})$$
$$= 3 \overrightarrow{\overrightarrow{i}} + 6 \overrightarrow{\overrightarrow{j}}.$$

We also compute

$$\overrightarrow{\boldsymbol{v}} - \operatorname{proj}_{\overrightarrow{\boldsymbol{b}}} \overrightarrow{\boldsymbol{v}} = (\overrightarrow{\boldsymbol{i}} + 7\overrightarrow{\boldsymbol{j}}) - (3\overrightarrow{\boldsymbol{i}} + 6\overrightarrow{\boldsymbol{j}}) = -2\overrightarrow{\boldsymbol{i}} + \overrightarrow{\boldsymbol{j}}.$$

We conclude that

$$\overrightarrow{\mathbf{v}} = (3\overrightarrow{\mathbf{i}} + 6\overrightarrow{\mathbf{j}}) + (-2\overrightarrow{\mathbf{i}} + \overrightarrow{\mathbf{j}}), \text{ with } 3\overrightarrow{\mathbf{i}} + 6\overrightarrow{\mathbf{j}} \text{ parallel to } \overrightarrow{\mathbf{b}}$$

and $-2\overrightarrow{\mathbf{i}} + \overrightarrow{\mathbf{j}}$ perpendicular to $\overrightarrow{\mathbf{b}}$

Check. Observe that

•
$$(3\vec{i} + 6\vec{j}) + (-2\vec{i} + \vec{j}) = 1\vec{i} + 7\vec{j} = \vec{v}\checkmark,$$

• $3\vec{i} + 6\vec{j}$, which is equal to 3 times \vec{b} is parallel to $\vec{b}\checkmark$, and

• $(-2\vec{i}+\vec{j})\cdot\vec{b} = (-2\vec{i}+\vec{j})\cdot(\vec{i}+2\vec{j}) = 0.\checkmark$
