$\qquad$

## No calculators, cell phones, computers, notes, etc.

Circle your answer. Make your work correct, complete and coherent.
Please take a picture of your quiz (for your records) just before you turn the quiz in. I will e-mail your grade and my comments to you. I will keep your quiz.

The quiz is worth 5 points. The solutions will be posted on my website later today.

## Quiz 5, March 21, 2022

Find the directional derivative of the function $f(x, y)=2 x y-3 y^{2}$ at the point $P_{0}=(5,5)$ in the direction of $\overrightarrow{\boldsymbol{u}}=4 \overrightarrow{\boldsymbol{i}}+3 \overrightarrow{\boldsymbol{j}}$.

ANSWER: We compute

$$
\begin{aligned}
\left.D_{\overrightarrow{\boldsymbol{u}}} f\right|_{P_{0}} & =\left.\vec{\nabla} f\right|_{P_{0}} \cdot \frac{\overrightarrow{\boldsymbol{u}}}{|\overrightarrow{\boldsymbol{u}}|}=\left.\left(\frac{\partial f}{\partial x} \overrightarrow{\boldsymbol{i}}+\frac{\partial f}{\partial y} \overrightarrow{\boldsymbol{j}}\right)\right|_{P_{0}} \cdot \frac{4 \overrightarrow{\boldsymbol{i}}+3 \overrightarrow{\boldsymbol{j}}}{\sqrt{4^{2}+3^{2}}} \\
= & \left.(2 y \overrightarrow{\boldsymbol{i}}+(2 x-6 y) \overrightarrow{\boldsymbol{j}})\right|_{(5,5)} \cdot \frac{4 \overrightarrow{\boldsymbol{i}}+3 \overrightarrow{\boldsymbol{j}}}{5} \\
& =(10 \overrightarrow{\boldsymbol{i}}-20 \overrightarrow{\boldsymbol{j}}) \cdot \frac{4 \overrightarrow{\boldsymbol{i}}+3 \overrightarrow{\boldsymbol{j}}}{5} \\
= & (2 \overrightarrow{\boldsymbol{i}}-4 \overrightarrow{\boldsymbol{j}}) \cdot(4 \overrightarrow{\boldsymbol{i}}+3 \overrightarrow{\boldsymbol{j}})=8-12=-4
\end{aligned}
$$
