## Math 546, Exam 3, Fall, 2022

You should KEEP this piece of paper. Write everything on the blank paper provided. Return the problems in order (use as much paper as necessary), use only one side of each piece of paper. Number your pages and write your name on each page. Take a picture of your exam (for your records) just before you turn the exam in. I will e-mail your grade and my comments to you. I will keep your exam. Fold your exam in half before you turn it in.

## No calculators, cell phones, computers, notes, etc.

## Make your work correct, complete, and coherent.

The exam is worth 50 points. Each problem is worth 10 points.
We use $\mathcal{G}$ to mean the group of rigid motions of the plane under composition and we use $D_{3}$ to mean the subgroup of $\mathcal{G}$ generated by $\sigma$ and $\rho$, where $\sigma$ is reflection across the $x$-axis and $\rho$ is rotation counter-clockwise by $2 \pi / 3$ fixing the origin. Recall that

$$
\sigma \circ \sigma=\mathrm{id}, \quad \rho \circ \rho \circ \rho=\mathrm{id}, \quad \text { and } \quad \rho \circ \sigma=\sigma \circ \rho \circ \rho .
$$

The solutions will be posted later today.
(1) Consider $\phi: D_{3} \rightarrow D_{3}$, which is given by $\phi(a)=\sigma \circ a$, for $a \in D_{3}$. Is $\phi$ a one-to-one and onto function? If so, prove it. If not, explain why not.
(2) Consider $\phi: D_{3} \rightarrow D_{3}$, which is given by $\phi(a)=\sigma \circ a$, for $a \in D_{3}$. Is $\phi$ a group homomorphism? If so, prove it. If not, explain why not.
(3) Let $S$ be the set of left cosets of $H=\langle\sigma\rangle$ in $D_{3}$. Consider $\Phi: S \times S \rightarrow S$, which is given by $\Phi(a \circ H, b \circ H)=(a \circ b) \circ H$, for $a, b \in D_{3}$. Is $\Phi$ a function? If so, prove it. If not, explain why not.
(4) Let $G$ the subgroup of $(\mathbb{Z},+)$ generated by 339,565 , and 791 . Which integer generates $G$ ? Explain.
(5) Let $U_{18}$ be the group of complex numbers which satisfy the equation $z^{18}=1$. The operation in $U_{18}$ is multiplication. List the subgroups of $U_{18}$ ? Explain.
