## Quiz for February 11, 2010

The quiz is worth 5 points. Remove EVERYTHING from your desk except this quiz and a pen or pencil.

True or False. If true, prove it. If false, give a counter example. Let $G$ be a group and let $H$ be the subset $H=\left\{g \in G \mid g^{2}=\mathrm{id}\right\}$. Then $H$ is a subgroup of $G$.
ANSWER: FALSE. Let $G=D_{3}$. We have $H=\left\{i d, \sigma, \sigma \rho, \sigma \rho^{2}\right\}$. The set $H$ is not a group because this set is not closed since $\sigma$ and $\sigma \rho$ are in $H$ but the product $\sigma(\sigma \rho)=\rho$ is not in $H$.
